

A CRM APPLICATION FOR THE CHAI SHOP & CO

User Story:

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer relationships and streamline sales processes using our CRM application.

I want to easily access and update employer details, as well as distinguish between online and offline customer records using record types, allowing for personalized interactions.

Additionally, I need the application to automate sales calculations, such as order quantity and total bill amount, to ensure accurate and efficient transactions.

Moreover, I require the ability to generate insightful reports and dashboards to summarize and analyze sales data effectively, aiding in decision-making and strategy development.

Lastly, I would like the application to automate email notifications to customers on their birthdays, informing them of special offers tailored to celebrate their special day, enhancing customer engagement and loyalty.

1. INTRODUCTION

1.1 Project Overview :

The project “A CRM Application for TheChaiShop&Co” focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer, employer, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The project user story and objectives are defined in the initial section of the document

1.2 Purpose :

The purpose of this project is to:

- Streamline customer relationship management

- Automate billing and order calculations
- Improve data accuracy
- Enable data-driven decision-making
- Enhance customer engagement through email automation

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Sales Representative	Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	Stressed and inefficient
PS-2	Store Manager	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied
PS-3	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and undervalued

2.2 Empathy Map Canvas

Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

Empathy Analysis

Problem Statements – TheChaiShop&Co CRM Application

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1		Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	
PS-2		Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Stressed and inefficient
PS-2		Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied 
PS-3		Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and underwhelmed 

Aspect	Description
Think & Feel	Need accurate customer data and reports
Hear	Feedback from management
See	Multiple registers and spreadsheets
Say & Do	Enter data manually
Pain	Errors, delays, data loss
Gain	Automation, fast reports

2.3 Brainstorming

Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM
- Salesforce-based CRM
- Automated email system

Selected Idea:

Salesforce-based CRM Application for TheChaiShop&Co..

Brainstorming – TheChaiShop&Co CRM Application

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	User Login
FR-2	Object Creation
FR-3	Data Entry
FR-4	Billing Automation
FR-5	Report Generation
FR-6	Email Automation

Non-Functional Requirements

NFR-1: Usability

The system should be easy to use for sales representatives, managers, administrators, and analysts without requiring technical training.

Requirements :

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-understand forms
- User-friendly dashboards

Example:

A new sales employee should be able to log in, enter customer details, and generate orders within a few minutes without help.

Salesforce Lightning UI provides drag-and-drop features and easy navigation.

NFR-2: Security

The system must protect customer and business data from unauthorized access.

Requirements:

- Role-based access control
- Secure login authentication
- Encrypted data storage
- Data backup and recovery

Examples:

- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

NFR-3: Reliability

The CRM system should work correctly at all times and store data accurately without loss.

Requirements:

- Automatic data saving
- Regular system backups
- Error handling mechanisms
- Stable cloud environment
- Data backup and recovery

Examples:

- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

NFR-4: Performance

The system should respond quickly and handle large amounts of data efficiently.

Requirements:

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal delay

Example: When a manager generates monthly sales reports for hundreds of customers, the report should load within 2–3 seconds.

Optimized queries and caching improve speed.

NFR-5: Availability

The system should be accessible whenever required.

Requirements:

- 24/7 system availability
- Minimal downtime
- Cloud-based hosting
- Disaster recovery

Example: Managers should be able to access the CRM system during peak business hours, weekends, or late nights.

Salesforce cloud provides high uptime.

NFR-6: Scalability

The system should support business growth without affecting performance.

Requirements:

- Ability to handle more users
- Support increasing customer data
- Expandable storage
- Maintain system speed

Example: If TheChaiShop&Co expands to multiple branches, the CRM system should support thousands of customers without slowing down.

Salesforce infrastructure automatically scales.

3.3 Data Flow Diagram

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards.

3.4 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

4.2 Proposed Solution

Functional Requirements

Parameter	Description
-----------	-------------

User Login & Authentication	Allows authorized users to securely log in to the CRM system using valid credentials.
Customer Record Management	Enables users to create, view, update, and delete customer details such as name, contact number, and address.
Employer & Enterprise Management	Allows management of employer and enterprise account information for business operations.
Order Management	Supports creation and tracking of customer orders, including order quantity and product details.
Automated Billing System	Automatically calculates total bill amount using formula fields based on order quantity and pricing.
Validation Rules	Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar.
Record Types & Page Layouts	Provides different record types and layouts for various customer and enterprise categories.
Global Picklists	Maintains standardized values for fields such as product type, category, and status.
Email Notification System	Sends automated emails to customers for birthdays, offers, and order confirmations.
Workflow & Flow Automation	Automates tasks such as updating records and triggering alerts using Salesforce Flows.
Report Generation	Generates detailed reports on sales, customers, and enterprise performance.
Dashboard Visualization	Displays real-time analytics through interactive dashboards and charts.
Data Backup & Recovery	Ensures secure storage and recovery of business data in the Salesforce cloud.
User Role Management	Controls system access using profiles and permission sets for different users.

4.3 Solution Architecture

Architecture Layers

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- The project followed an Agile-based development approach with defined milestones and sprints.
- A Salesforce Developer account was created to set up the development environment.

- Custom objects were designed to store customer, employer, and enterprise data.
- Custom tabs and a Lightning Application were developed for easy system navigation.
- Fields, relationships, and global picklists were configured to ensure data consistency.
- Page layouts and record types were created based on user roles and customer categories.
- Validation rules were implemented to prevent incorrect data entry.
- Email templates and automated flows were developed for customer notifications.
- Reports and dashboards were created for performance monitoring and analysis.
- Regular sprint reviews and testing were conducted to track progress and resolve issues.
- The project was completed within the planned timeline through systematic scheduling.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account so that I can configure and deploy the TheChaiShop&Co CRM application.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored and managed systematically.	3	High	Member2
Sprint-2	Data Modeling	USN-3	As a user, I want separate tabs for each object so that I can easily navigate and manage CRM records within the application.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As a manager, I want a dedicated Lightning App so that all CRM operations are accessible from a single dashboard.	3	High	Member4
Sprint-2	Data Modeling	USN-5	As an admin, I want to create customer and order fields so that complete sales and billing details can be captured accurately.	5	Medium	Member1
Sprint-2	Data Modeling	USN-6	As a user, I want customized page layouts for different record types so that only relevant information is displayed during data entry	5	High	Member2

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Data Modeling	USN-7	As a manager, I want separate record types for Retail and Enterprise customers so that different business categories can be managed efficiently.	5	Medium	Member3
Sprint-3	Automation	USN-8	As a system, I want to validate customer details and order inputs so that incorrect data entries are prevented.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows to send email notifications so that customers receive timely updates and offers.	5	High	Member1
Sprint-4	Automation	USN-10	As a system, I want to automatically calculate billing amounts so that invoices are generated without manual effort.	5	High	Member2
Sprint-5	Reports	USN-11	As a manager, I want sales and customer reports so that I can monitor business performance and make informed decisions.	4	High	Member3
Sprint-6	Dashboards	USN-12	As a manager, I want visual dashboards so that I can quickly analyze sales, customers, and enterprise performance.	4	Medium	Member4

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)

6. Project Development Phase:

Project Flow

Milestone 1 : Creation of developer account

Milestone 2 : Object Creation

Milestone 3 : Tabs

Milestone 4 : The Lightning App

Milestone 5 : Global Picklist

Milestone 6 : Fields and Relationships

Milestone 7 : Creation of Page Layout

Milestone 8 : Creation of Record Types

Milestone 9 : Validation rules

Milestone 10 : Email Templates

Milestone 11 : Flows

Milestone 12 : Reports and Dashboards

Milestone 13 : Conclusion

What you'll learn

1. Real Time Salesforce Project
2. Standard and Custom objects
3. Picklist Value sets
4. Types of Fields & their relationships.
5. Page Layouts
6. Record Types
7. Validation Rules
8. Email Templates
9. Flows
10. Reports and Dashboards.

Implementation

Milestone 1 - Salesforce developer account creation :

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

Build for the Agentic Enterprise. Sign up for your Developer Edition.

The entire Salesforce platform - exposed as APIs, MCP tools, and CLI commands. Build apps, ship agents, and let coding agents do the heavy lifting with Salesforce Headless 360.

- ✓ Build AI agents with Agentforce, grounded in your data with Data 360
- ✓ Connect Claude Code, Cursor, or Codex to your org with hosted MCP
- ✓ Build in the browser with the Agentforce Vibes IDE - no setup required
- ✓ Drag-and-drop when you want it, Apex when you need it
- ✓ 60+ MCP tools and 30+ coding skills, ready out of the box

Sign up for your Developer Edition

A free Salesforce Platform environment with Agentforce and Data 360

First name	Last name
Job title	Company
Country/region	Work email
India	

☐ I agree to the [Main Services Agreement – Developer Services](#), [Salesforce Program Agreement](#), and [API Terms of Service](#)

Your free trial may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

We value your privacy. To learn more, visit our [Privacy Statement](#).

Sign me up

- 1) First name & Last name
- 2) Email
- 3) Role : Developer
- 4) Company : College or Company Name
- 5) Country : India
- 6) Postal Code : pin code
- 7) Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in that format :

[username@organization.com](#)

Click on sign me up after filling these.

Activity 2: Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account.
3. Give a password and answer a security question and click on change password.

A screenshot of the "Change Your Password" form in Salesforce. The title "Change Your Password" is at the top. Below it, the text says "Enter a new password for lead@s3b.com. Make sure to include at least:". There are three green checkmarks indicating requirements: "8 characters", "1 letter", and "1 number". Below these are two password input fields: "New Password" and "Confirm New Password", both with masked characters and toggle icons. Underneath is a "Security Question" section with a dropdown menu showing "In what city were you born?". Below the dropdown is an "Answer" input field containing the text "Chennai". At the bottom is a large blue button labeled "Change Password".

4. Then you will redirect to your salesforce setup page.

Milestone 2 - Objects

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

Activity 1 : Employer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
 - **Label** : Employer Account
 - **Plural Label** : Employer Accounts
 - Enter Record Name Label and Format
Record Name : Employer Account Name
Data Type : Text
 - **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
 - **Search Status** : check the box for Allow Search.

- Save

Activity 2 : Customer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
 - **Label** : Customer Account
 - **Plural Label** : Customer Accounts
 - Enter Record Name Label and Format
Record Name : Customer Account Name
Data Type : Text
 - **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
 - **Search Status** : check the box for Allow Search.
 - Save

Activity 3 : Enterprise Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
 - **Label** : Enterprise Account
 - **Plural Label** : Enterprise Accounts
 - Enter Record Name Label and Format
Record Name : Enterprise Account Name
Data Type : Text
 - **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
 - **Search Status** : check the box for Allow Search.
 - Save

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Select Object(Employer Accounts) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Customer Accounts and Enterprise Accounts.

Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

2. Fill the app name in app details and branding as follow
 App Name : TheChaiShop&Co
 Developer Name : Auto Populates
 Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.
 Then click Next.
3. In App options
 Navigation style : Standard navigation
 Setup experience : setup
 Supporters form factors : Desktop and phone
 Then click Next
4. In Utility items
 Utility Bar alignment : Default
 Then click Next.
5. Navigation items
 Select the created Custom Objects and required standard objects
 - Customer Accounts
 - Employer Accounts
 - Enterprise Accounts
 - Reports

6. To Add User Profiles : System Administrator

User Profiles

Choose the user profiles that can access this app.

Available Profiles

🔍 system administrator

Selected Profiles

System Administrator

7. Click Save & Finish.

Milestone 5 : Global Picklist

Activity 1 : Create Global Picklist

1. In Quick find box search for : Picklist value sets and click New.

- **Label** : Gender
Name : Auto Populates
Values : Male
 Female
 Others
 Click **Save & New**.

The screenshot shows the 'Global Value Set Edit' form. At the top, there are buttons for 'Save', 'Save & New', and 'Cancel'. The form has a section titled 'Information' with a red exclamation mark and 'Required Information'. It contains three input fields: 'Label' with the value 'Gender', 'Name' with the value 'Gender', and 'Description' which is empty. Below these is a 'Values' section with a text area containing the text 'Male', 'Female', and 'Others' on separate lines. A note above the text area says 'Enter values, with each value separated by a new line'.

2. Create three more Global picklists following the same steps.

- **Label** : Items
Name : Auto populates
Values : Platinum Tea Powder
 Double Delight Tea Powder
 Super Dust Tea Powder
 Osmania Biscuits (Value Pack)
 Osmania Biscuits (Premium Pack)
 Dry Fruit Biscuits
 Fruit Biscuits

Salt Biscuits
Multigrain Biscuits
Ragi Biscuits
Double Choco Chip Cookies
Butter Almond Cookies
Melting Moments Cookies
Honey Oats Cookies
Delight Box
Signature Box
Assorted Box

Click **Save & New**.

- **Label** : Payment Mode
Name : Auto populates
Values : Gpay
PhonePe
Paytm
Credit or Debit card
Cash.

Click **Save & New**.

- **Label** : Type of Items
Name : Auto populates
Values : Tea powder
Cookies
Gift Hampers

Click **Save**.

Picklist Value Sets

Global picklist value sets let you share the values across objects. Base custom picklist fields on a global value set to inherit its values. The value set is restricted so users can't add unapproved values through the API.

View: All [Create New View](#)

Deleted Global Value Sets (0)

Milestone 6 : Fields & Relationships

Activity 1 : Create Custom fields for Employer Account

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Employer Account**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.

Fields & Relationships

14 Items, Sorted by Field Label

[New](#)[Deleted Fields](#)[Field Dependencies](#)[Set History Tracking](#)

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Aadhar Number	Aadhar_Number__c	Text(12)		
Created By	CreatedBy	Lookup(User)		

6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

Allows users to select a True (checked) or False (unchecked) value.

Allows users to enter a dollar or other currency amount and automatically formats the field as a currency amount. This can be useful if you export data to Excel or another spreadsheet.

Allows users to enter a date or pick a date from a popup calendar.

Allows users to enter a date and time, or pick a date from a popup calendar. When users click a date in the pop-up, that date and the current time are entered into the Date/Time field.

Allows users to enter an email address, which is validated to ensure proper format. If this field is specified for a contact or lead, users can choose the address when clicking Send an Email. Note that custom email addresses cannot be used for mass emails.

Allows users to define locations. Includes latitude and longitude components, and can be used to calculate distance.

Allows users to enter any number. Leading zeros are removed.

Allows users to enter a percentage number, for example, '10' and automatically adds the percent sign to the number.

Allows users to enter any phone number. Automatically formats it as a phone number.

Allows users to select a value from a list you define.

Allows users to select multiple values from a list you define.

Allows users to enter any combination of letters and numbers.

Allows users to enter up to 255 characters on separate lines.

Allows users to enter up to 131,072 characters on separate lines.

Allows users to enter formatted text, add images and links. Up to 131,072 characters on separate lines.

☐ None Selected Select one of the data types below.

☐ Checkbox	Calculate a boolean value. Example: <code>TODAY() > CloseDate</code>
☐ Currency	Calculate a dollar or other currency amount and automatically format the field as a currency amount. Example: <code>Gross Margin = Amount - Cost_c</code>
☐ Date	Calculate a date, for example, by adding or subtracting days to other dates. Example: <code>Reminder Date = CloseDate - 7</code>
☐ Date/Time	Calculate a date/time, for example, by adding a number of hours or days to another date/time. Example: <code>Next = NOW() + 1</code>
☒ Number	Calculate a numeric value. Example: <code>Fahrenheit = 1.8 * Celsius_c + 32</code>
☐ Percent	Calculate a percent and automatically add the percent sign to the number. Example: <code>Discount = (Amount - Discounted_Amount_c) / Amount</code>
☐ Text	Create a text string, for example, by concatenating other text fields. Example: <code>Full Name = LastName & ", " & FirstName</code>

Enter Formula = Quantity (Number) =

Milestone 7 : Page Layouts

For the personalized field view in Customer Accounts, let's create two page layouts
Online orders and Walk-In orders.

Activity 1: Online Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Page Layouts → click New.

3. Page Layout Name : Online Orders and click Save.

4. Drag and Arrange all the required fields as shown below.

5. Click **Save**.

Activity 2: Walk-In Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Page Layouts → click New.
3. Page Layout Name : Walk-In orders and click save.
4. Drag and Arrange all the required fields as shown below.

5. Click **Save**.

Milestone 8 - Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two different Record Types.

Online orders and Walk-In orders.

Activity 1: Online Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Record Types → click New.

3. Enter Details :
Existing Record Type : Master
Record Type Label : Online Order

Record Type Name : Auto Populates
Active : Tick the checkbox
Click Next

The screenshot shows the 'New Record Type' setup page for 'Customer Account'. The page is titled 'Step 1. Enter the details' and 'Step 1 of 2'. It includes a 'Record Type' section with the following fields: 'Existing Record Type' (dropdown menu set to '-Master--'), 'Record Type Label' (text box containing 'Online Order'), 'Record Type Name' (text box containing 'Online_Order'), 'Description' (empty text box), and 'Active' (checkbox checked). A 'Required Information' icon is visible in the top right corner of the form area.

4. In Assign Page Layouts

- Select Apply one layout to all profiles : select **Online orders** from the drop down menu.

Select the page layout that users with this profile see for records with this record type. After saving, choose the the **picklist values that are** available with this record type.

The screenshot shows the 'Assign Page Layouts' section. It has two radio buttons: 'Apply one layout to all profiles' (selected) and 'Apply a different layout for each profile'. Next to the selected radio button is a dropdown menu showing 'Online Orders'.

5. Click **Save and New**.

Activity 2: Walk-In Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Record Types → click New.
3. Enter Details :
Existing Record Type : Master
Record Type Label : Walk-In Order
Record Type Name : Auto Populates
Active : Tick the checkbox
Click Next
4. In Assign Page Layouts

- Select Apply one layout to all profiles : select **Walk-In orders** from the drop down menu.

5. Click **Save**.

Milestone 9 - Validation Rules

Activity 1: On Employer Account

1. Go to the setup page → click on object manager → From drop down click edit for **Employer Account** object.
2. Click on the validation rule → click New.

SETUP > OBJECT MANAGER

Phone_Number	Top of Page	9360775027	✓	Suriya R, 9/22/2026, 1:23 AM	▼

3. **Enter Rule Name : Aadhar Number**

Error Condition Formula :

```
AND(
  NOT(ISBLANK( Aadhar_Number__c )),
  LEN( Aadhar_Number__c ) <> 12,
  NOT(REGEX( Aadhar_Number__c , "[1-9]{12}$"))
)
```

Employer Account Validation Rule

Define a validation rule by specifying an error condition and a corresponding error message. The error condition is written as a Boolean formula expression that returns true or false. When the formula expression returns true, the save will be aborted and the error message will be displayed. The user can correct the error and try again.

Validation Rule Edit [Save] [Save & New] [Cancel]

4. Error Message : Aadhar number is required.

The Aadhar number must be 12 digits long.
Aadhar number can only contain numeric digits.
Aadhar number never starts with 0

5. Click **Save & New**.

Error Message

Example:

This message will appear when Error Condition formula is true

Error Message:

This error message can either appear at the top of the page or below a specific field on the page

Error Location: ☒ Top of Page ☐ Field

6. Repeat the same steps and create two more validation rules on the employer account object.

- **Enter Rule Name : PAN Number**

Error Condition Formula :

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "[1-9]{10}$")),  
  NOT(REGEX( Phone_Number__c , "\\d+$"))  
)
```

Error Message : The PAN Details field must not be blank.

The PAN card number does not start with 0.
The PAN card number does not contain special characters.

Click **Save & New**.

- **Enter Rule Name** : Phone Number

Error Condition Formula :

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "[1-9]{10}$")),  
  NOT(REGEX( Phone_Number__c , "\\d+$"))  
)
```

Error Message :

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits
(no spaces, dashes, parentheses, etc.)

Click **Save**.

Activity 2: On Customer Account

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the validation rule → click New.
3. **Enter Rule Name** : Phone Number

Error Condition Formula :

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "[1-9]{10}$")),  
  NOT(REGEX( Phone_Number__c , "\\d+$"))  
)
```

Error Message :

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits
(no spaces, dashes, parentheses, etc.)

4. Click **Save**.

Activity 3: On Enterprise Account

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the validation rule → click New.
3. **Enter Rule Name** : Phone Number

Error Condition Formula :

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "[1-9]{10}$")),  
  NOT(REGEX( Phone_Number__c , "\\d+$"))  
)
```

Error Message :

The phone number field must not be blank.
The phone number must consist of exactly 10 digits.
The phone number must contain only numeric digits
(no spaces, dashes, parentheses, etc.)

4. Click **Save**.

Milestone 11 - Flows

Let's create a scheduled Triggered flow to automate the Birthday offer mails.

Activity 1: Schedule Triggered Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with 'flows' entered. Under 'Process Automation', 'Flows' is selected. The main content area shows the 'Flows' section with a 'New Flow' button. Below this is a table of 'Flow Definitions'.

Flow Label ↑	Process Type	Act...	Te...	Package State	Pac...	Las...	Las...
Add Case Comment	Autolaunched Flow	☒	☐	Managed-Installed			
Add or Modify Service Appointment Attendees	Salesforce Scheduler Flow	☒	☐	Managed-Installed			

2. Select Schedule - Triggered Flow and click Create.

The screenshot shows the 'New Automation' dialog box. It has a 'Developer Edition' header. The main content is divided into 'Categories' and 'Frequently Used' sections.

Categories

- Triggered Automations**: Automations launched by records and events. This type of automation runs without user interaction. [View All Automations](#)

Create

- A screenshot of the Dashboards toolbar. The 'Widget' button is highlighted in blue and its dropdown menu is open, showing four options: 'Chart or Table' (with a line chart icon), 'Text' (with a text icon), 'Image' (with a picture icon), and 'Lightning Web Component' (with a lightning bolt icon). The toolbar also includes buttons for '+ Filter', undo, redo, settings, 'Save', a dropdown arrow, and 'Done'.

- ## 7. Select Customer Account Sales Report

REPORTS	Report Name	Description
Recent	Customer Account Sales Report	
Created by Me	Enterprise Account Sales Report	

8. Display As : Select the one which you feel comfortable with.
9. Click **Add**

The 'Add Component' dialog box shows the 'Customer Sales Report' selected. The 'Display As' section has a grid of chart icons. The 'Y-Axis' is set to 'Customer Account: Record Type' and the 'X-Axis' is empty. The 'Preview' section shows a horizontal bar chart with two bars: 'Online Order' with a value of 29 and 'Walk-In Orders' with a value of 12. The chart title is 'Customer Sales Report' and the y-axis label is 'Customer Account: Record Type'.

10. Repeat the same steps for the Enterprise Account Sales Report.
11. Click **Save**.

Milestone 12 - Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer

relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify correct system behavior. These include:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rule testing for Aadhar, PAN, and phone numbers
- Verification of record types and page layouts
- Formula field validation for order quantity and billing
- Flow execution for birthday email alerts
- Report and dashboard generation

Performance testing ensured fast response time and system stability during concurrent usage.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement

- Real-time analytics

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9. Conclusion:

The CRM Application for TheChaiShop&Co successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The system reduces errors, saves time, and enhances customer relationships through automation and analytics.

10. FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts
- Inventory management
- Multi-branch support
- Advanced customer profiling
